PROFESSIONAL SUMMARY

Accomplished Senior Python & Data Engineer with 7+ years of experience designing high-throughput data ingestion pipelines, containerized microservice architectures, and analytical platforms. Expert in building fault-tolerant backend REST APIs with Python and FastAPI, tuning relational data models in PostgreSQL, and deploying container workloads across Kubernetes clusters.

TECHNICAL SKILLS & COMPETENCIES

Python, SQL, Docker, FastAPI, Pandas, PostgreSQL, Git, Kubernetes, Redis, CI/CD

PROFESSIONAL EXPERIENCE

Senior Data Platform Engineer - Apex Analytics Corp (2021 - Present)

- Architected scalable data ingestion services and high-throughput REST APIs using Python and FastAPI handling 20M+ events daily.
- Designed, optimized, and maintained complex relational databases, analytical data warehouses, and schema migrations using SQL and PostgreSQL.
- Constructed distributed data processing workflows and feature transformation pipelines leveraging Pandas.
- Packaged, containerized, and deployed scalable microservices using Docker and managed container orchestration with Kubernetes.
- Drove engineering excellence, code review practices, branch management, and automated release workflows using Git.

Backend Software & Data Engineer - CloudMatrix Solutions (2018 - 2021)

- Developed asynchronous backend services in Python connecting distributed caching layers in Redis and PostgreSQL.
- Optimized database queries, indexing strategies, and pipeline execution latencies for large-scale enterprise datasets.
- Collaborated in Agile sprints following strict Git feature-branch and code review standards.

EDUCATION

Bachelor of Science in Computer Science, University of Washington
